OBJECTIVE

Final year B.Tech CSE student and AI-powered builder who ships real products using Python, LLMs, and modern tooling. Built computer vision systems achieving <100ms real-time latency, an NLP chatbot and ML sentiment-analysis pipeline (~95.6% accuracy), a YOLOv8 + Deep SORT object-tracking dashboard, and a full-stack neural translation platform. Seeking product-based company and MNC roles where speed, ownership, and AI literacy matter.

EDUCATION

B.Tech — Computer Science & Engineering

2023 – 2027

Arya College of Engineering, Jaipur

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks, Cloud Computing

SKILLS

Languages: Python, JavaScript, TypeScript, SQL, HTML, CSS, Java (basic)

AI / ML / NLP / CV: MediaPipe, OpenCV, YOLOv8, Deep SORT, NLP (TF-IDF, Cosine Similarity), NumPy, Pandas, Scikit-Learn, Logistic Regression, PyAutoGUI, TensorFlow (learning)

Generative AI: Gemini API, Imagen, Vertex AI, Prompt Engineering

Cloud & Infra: Google Cloud Platform, AWS (basics), Vercel, Flask, FastAPI, REST APIs

Web & Backend: React, Next.js, Node.js (basic), Selenium, Spring Framework (basic), Apache Kafka (basic)

Tools: Git, GitHub, VS Code, Figma, Jupyter Notebook, Streamlit, Tableau, Excel

Database: MongoDB, Supabase, Firebase

EXPERIENCE

AI/ML Intern — Project-Based Internship

May 24 – Jun 25, 2026

HorizonTechX

Remote

- Delivered 4 independent AI/ML products spanning NLP, classical machine learning, computer vision, and full-stack development within a 4-week sprint; all repositories open-sourced with full documentation, setup guides, and (where applicable) automated tests.
- Built and shipped 4 production-grade AI/ML applications end-to-end (NLP chatbot, ML sentiment classifier, YOLOv8 computer-vision tracker, full-stack translation platform) in a 4-week sprint at HorizonTechX, independently owning the full lifecycle from architecture and model training to deployment, documentation, and automated testing.

Data Analytics Intern

2025

Codveda Technologies

Remote

- Delivered end-to-end exploratory data analysis on 3+ real-world datasets using Pandas and NumPy — covering data ingestion, cleaning, transformation, and actionable reporting for stakeholders.
- Built visualization reports translating statistical findings into business-readable charts; met 100% of deliverable timelines across multiple project iterations in a professional team environment.

PROJECTS

Finger Mouse — Real-Time Gesture-Controlled Virtual Touchpad

2024

Python, MediaPipe, OpenCV, PyAutoGUI | github.com/SAURAV-GGD/Finger-Mouse

- Engineered a 21-landmark hand-tracking pipeline using MediaPipe and OpenCV achieving <100ms real-time latency across varied lighting conditions with zero external hardware dependencies.
- Implemented 5 gesture modes — cursor movement, left/right click, drag-and-drop, and two-finger scroll — with conflict resolution and smoothing algorithms; sole developer from architecture to open-source release on GitHub.

CampusMart — Hyperlocal Quick-Commerce Platform

2025

React, Node.js, UPI Integration, REST APIs

- Designed and prototyped an on-demand campus delivery platform with flat ₹10 delivery fee, UPI-based payments, and same-hour delivery; onboarded 4 pilot vendor shops within the first month of launch.
- Architected vendor onboarding, student storefront, order tracking, and payment confirmation flow solo using AI-accelerated development, cutting estimated build time by ~60%.

AI Chatbot for FAQs | Python (NLP) | github.com/SAURAV-GGD/HorizonTechX_Chatbot-NLP

2026

- Built a zero-dependency NLP chatbot from scratch using a hand-rolled TF-IDF + cosine-similarity intent-matching engine with confidence-threshold fallback; validated with a 23-test automated suite and shipped both a CLI and a Flask web interface.
- Indexed 12 FAQs across 55 alternate phrasings spanning 7 topic categories and tuned a 0.20 similarity threshold to balance answer confidence against fallback rate; exposed a JSON REST endpoint (POST /api/chat) for third-party integration.

Sentiment Analysis Dashboard | Python, scikit-learn, Streamlit | github.com/SAURAV-GGD/HorizonTechX_Sentiment-Analysis-

- Trained a TF-IDF + Logistic Regression sentiment classifier on a labeled 1,800-sample dataset across 3 text sources, reaching ~95.6% test accuracy (per-class F1 up to 0.97); deployed an interactive Streamlit dashboard for live predictions and batch CSV analysis.
- Generated a synthetic 4-month dataset with ~4% deliberate label noise and negation/typo cases to stress-test the model, then automated 6 evaluation visuals (confusion matrix, sentiment distribution, source/trend breakdowns, word clouds) on an 80/20 train- test split.

Real-Time Object Detection & Tracking | YOLOv8, Deep SORT, FastAPI, React

github.com/SAURAV-GGD/HorizonTechX_Object-Detection-and-Tracking-opencv

- Engineered a full-stack computer-vision app pairing YOLOv8 (80-class real-time detection) with Deep SORT for persistent multi-object ID tracking, streaming annotated video via a FastAPI/MJPEG backend to a live React + Chart.js dashboard showing FPS, object counts, and per-class breakdowns.
- Built dual input modes (live webcam + video upload) with an adjustable confidence slider and per-class filtering across all 80 detectable categories; exposed dedicated /api/stream and /api/stats REST endpoints to decouple the React UI from the inference backend.

LinguaFlow AI — Neural Translation Platform | Next.js 15, TypeScript, Tailwind CSS

github.com/SAURAV-GGD/HorizonTechX_Language-Translation-Tool

- Developed a production-style translation web app with dual-provider API fallback (MyMemory + LibreTranslate) for high reliability, auto language detection, voice input and text-to-speech, 5 tone-adjustment modes, and a 50-entry local history cache; deployed on Vercel. saurav-ggd-translation.vercel.app/
- Architected secure server-side API routes (/api/translate, /api/detect) on Next.js 15's App Router to proxy translation calls, paired with a glassmorphic, flicker-free dark/light theme UI; shipped 6 internal technical docs (architecture, viva prep, internship logs) and a live public demo.

CERTIFICATIONS AND JOB SIMULATIONS

- Data Analytics Job Simulation — Deloitte Australia × Forage | March 2026
- Software Engineering Job Simulation — JPMorgan Chase × Forage | 2026
- Solutions Architecture Job Simulation — AWS × Forage | December 2026
- Engineer AI Agents with Agent Development Kit (ADK) — Google Cloud Skill Badge | 2026
- Build Real World AI Apps with Gemini and Imagen — Google Cloud Skill Badge | April 2025
- Develop GenAI Apps with Gemini and Streamlit — Google Cloud Skill Badge | May 2026
- Prompt Design in Vertex AI — Google Cloud Skill Badge | April 2025
- Develop Your Google Cloud Network — Google Cloud Skill Badge | May 2026
- Deploy Kubernetes Applications on Google Cloud — Google Cloud Skill Badge | April 2025
- Set Up an App Dev Environment on Google Cloud — Google Cloud Skill Badge | April 2025
- Get Started with Google Workspace Tools — Google Cloud Skill Badge | April 2025
- Encoder-Decoder Architecture — Google Cloud | September 2024
- AI for You: Training and Assessment — Oracle | 2025

LEADERSHIP AND ACTIVITIES

- Organized Arya College Rampwalk 2025 (Netflix-themed cosplay event) — built custom PPT and 16 AI-generated intro videos for the event.
- Junior Mentor and Event Coordinator — trained 20+ incoming students in technical events; managed 100+ participant college-wide programmes.
- Mentored junior students in project development and AI tool usage.
- Open-Source Contributor — maintains public GitHub repositories with README documentation, version control and history, fix issues and bugs, and installation guides.
- Runner-Up, Inter-College Weightlifting Competition — demonstrated discipline and consistency under competitive pressure.
- Mr. Fresher Runner-Up — recognized for confidence and communication among 300+ participants at a college-wide competition.
